Vishal Chatrath—Co-Founder & CEO, PROWLER.io

Vishal is CEO & Co-Founder of PROWLER.io, a Cambridge-based AI company whose mission is to enable leaders and organisations to make better decisions by optimising resources. PROWLER.io's decision-making engine, VUKU, can process data in real time, adapt to uncertainty, act on sparse information and learn from experience. The company's goal is to ensure that business is powered by people; empowered by AI.

Vishal's experience spans fundamental research, manufacturing, operations, R&D, product management, corporate strategy and business development, Vishal was previously Head of Automotive at Nokia, Founder of Chelon Automotive and Chief Business Officer of VocalIQ, which was acquired by Apple in 2015.

Homerton College, Cambridge

Celebrating their 250th anniversary, the foundations of Homerton College originally stem from 1768 in East London as an all-male institution.

In 1984, the college left East London and acquired its current site on Hills Road in Cambridge, becoming almost immediately a women only establishment as mixed colleges were frowned upon at the time. During the early twentieth century and beyond, Homerton was the leading name in the training of teachers. In 1976 the College began to take men again and became an 'Approved Society' of the University of Cambridge with many undergraduates reading for the Education Tripos.

In the late 1900's it went through a massive programme of rebuilding and refurbishment and in 2001 it converged with the University, diversifying to cover the different academic subjects offered by the University and adding a post-graduate research community. This culminated in 2012 with the award of a royal charter as a self-governing full College of the University of Cambridge making Homerton the newest and biggest Cambridge College with 1,400 students.
