UK leading the world in Neutral Host deployments

JOTS Neutral Host In-Building

MNOs have seen the benefits of sharing infrastructure.

- Models like MBNL and Cornerstone.

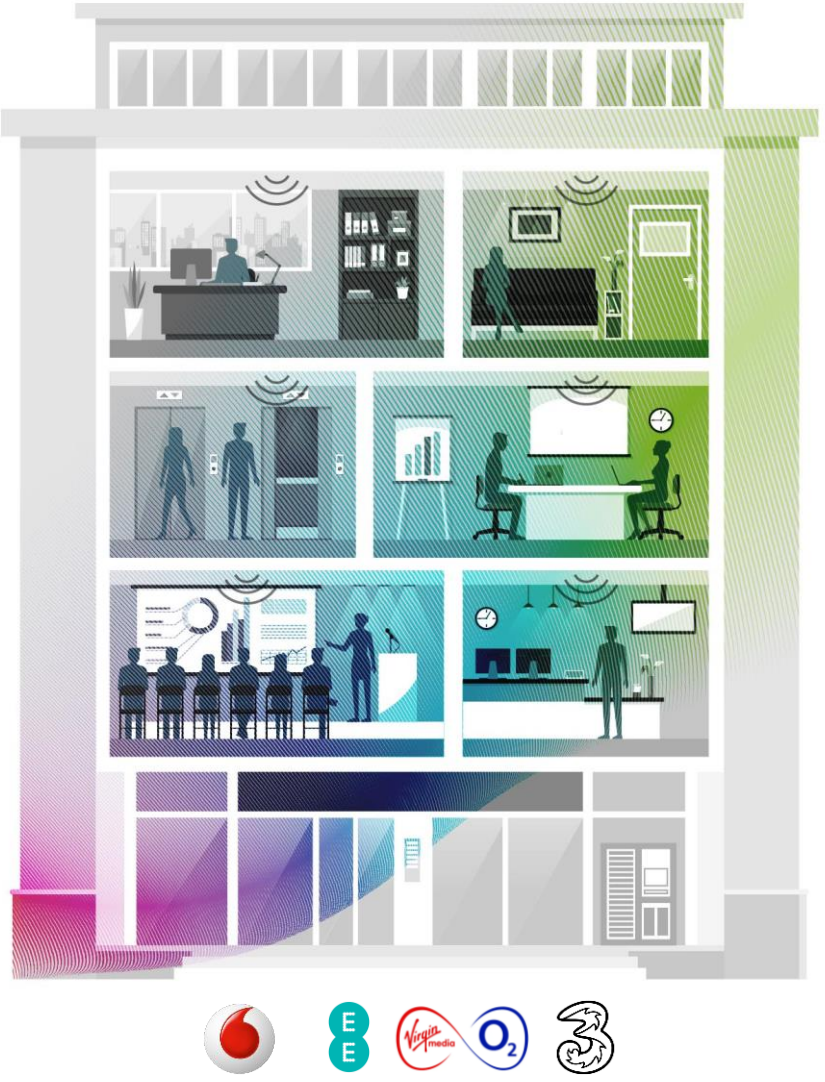
New in-building models where enterprise pays are further delivering coverage and capacity benefits.

- UK MNOs embracing Neutral Host in-building with JOTS issued this year.

Small cell outdoors in early phase in UK where cost effective and space efficient deployment is key.

- Further driving the need for use of single shared infrastructure.

Virgin Media O2, working with Freshwave and CommScope, became the first mobile network operator to make live calls from its network using JOTS Neutral Host n-Building.



Accelerating access to connectivity globally

boingo DIGITA extenet SYSTEMS zayo

Bio-Innovation centre

The scope of our services included surveys, design, spectrum acquisition, **5G core supply**, installation, configuration, provision of SIMs and support of the private network. Testing shows consistent download speeds of **750-850Mbps.**

Small Cell Forum

As a member of the Small Cell Forum, we have contributed to the **Neutral Host Requirements** report setting out the range of neutral hosting architectures in use and emerging today.

US and European sister companies

As a DigitalBridge company, we work together with our US and European sister companies to support the market with best in class solutions.
